An on-grid inverter's main job is to convert DC power generated from the PV array into usable AC power. Hybrid inverters go a step further and work with batteries to store excess power as well. In the developing world, hybrid inverters are more of a necessity to compensate for weak or intermittent grids or a lack of grid electricity all together.

Hybrid 1kw solar panel kit has a hybrid inverter. The difference between it and a standard grid-tie inverter is that a hybrid one doesn't just shut down once a power outage in the grid occurs. Hybrid inverters support a battery or have a built-in energy storage. When the grid goes down, an inverter switches your appliances to battery support.

Hybrid solar inverters can operate in three different modes: grid-tie, off-grid, and hybrid. In grid-tie mode, the hybrid solar inverter is connected to the grid, allowing excess solar electricity to be fed back into the grid. This can allow homeowners and businesses to earn credits or even receive payment for the excess electricity produced.
