

2007 honda accord power brake system diagram

Does a Honda Accord have a hybrid brake system?

In 2004, Honda introduced a hybrid version of the Accord featuring Honda's IMA technology. The brake system uses the same conventional components used on non-hybrid models, but the regenerative braking and hybrid system will have to be disabled before performing most brake work.

Do Acura accords have brakes?

Low-end versions of the Accord use drums in the rear. Late model Acura TLs use a disc brake system with a drum-in-hat style parking brake. Almost every seventh-generation Accord comes with ABS. All have standard Electronic Brake Distribution (EBD), so don't look for a proportioning valve.

Why is my accord brake pedal spongy?

If the brake pedal is now spongy, there may be air trapped in the modulator and then induced into the normal brake system during modulation. Exercise the ABS and bleed the brake system again, starting with the front wheels. The rotors on the seventh-generation Accord have a good reputation with technicians.
