Primary (non-rechargeable) lithium AA cells have more stable capacity but they are oriented to the same market. Capacity for NIMH batteries actually is quite stable under load. There is a trade-off between capacity,self-discharge and cycle life (and price), so low self-discharge batteries with high cycle life are often recommended even if their ...

Aa non-rechargeable lithium batteries

Rechargeable batteries typically have a lower initial energy capacity compared to non-rechargeable (alkaline or lithium) batteries. This means they might not last as long per charge. However, their ability to be recharged hundreds of times compensates for this, offering long-term savings and reduced environmental impact.
