

Alberta. Fossil fuels generate most of Alberta's electricity, but the province emerged over the past decade as a leading producer of wind energy in Canada. Between 2010 and 2017, Alberta's wind capacity doubled. Wind capacity is projected to double again by 2023 as Alberta continues with its phase out of coal-fired generation.

Generation Trends

The project will deploy renewable energy and grid modernization technologies to support the supply of clean energy to the Alberta electricity grid, reducing GHG emissions by approximately 29,000 tonnes of CO₂ e a year, equivalent to taking 8,900 gas-powered cars off the road. Deerfoot Solar is expected to have created an estimate of up to 660 ...

The area supports Alberta's energy industries and technology innovators in producing and delivering affordable and reliable energy, in all its forms, while delivering on environmental performance goals. Grid Modernization. Renewable and Alternative Energy is positioned to ensure Alberta's future electricity system is safe, reliable ...

On August 3, 2023, the Government of Alberta directed the Alberta Utilities Commission ("AUC") to implement a six-month pause on renewable power generation approvals and to conduct an inquiry on the ongoing economic, orderly and efficient development of electricity generation in Alberta. On February 29, 2024, that pause was lifted, and the ...

We present a case study and analysis of Alberta's Renewable Electricity Program, one of a suite of policies implemented between 2015 and 2019 to increase the share of renewable generation in the Canadian province's fossil-fuel-dominated electricity system. The program consisted of a series of reverse auctions for contracts-for-differences which provided ...

The Canadian Renewable Energy Association forecasts the addition of more than 5 GW of wind and 2 GW of major solar in the short term between 2023 and 2025. Wind capacity is Canada's second largest source of renewable electricity. Alberta, Ontario, Quebec, Nova Scotia, and Prince Edward Island are the biggest sources of this resource. ...

Alberta's pause on issuing approvals for renewable energy projects Pause ended on February 29, 2024. Immediately prior, the Alberta government issued a news release with updated policy guidance on developing renewable power projects in Alberta. This policy guidance addresses issues related to the use of agricultural lands, reclamation security, viewscape ...

On the ground in Kneehill County, residents' opposition to wind farm development is a microcosm of larger tensions over the transition to renewable energy in Alberta. In some ways, the debate around renewable energy

Alberta renewable energy policy

is an extension of familiar battles around industrial development, property rights and the balance between individuals and the ...

Get informed Background. On February 28, 2024, the Minister of Affordability and Utilities shared government's intention to advance policy, legislative and regulatory changes for renewable energy development before the end of 2024. These changes will provide clarity around municipal involvement and address recommendations for agricultural lands, reclamation ...

Solar energy is the cleanest and most abundant renewable energy source available. Southern Alberta is one of the regions in Canada with the highest solar potential. Types of solar installations used to generate heat or electricity: Passive systems: collect and store solar energy and distribute it by natural processes such as convection and ...

This update contains an overview of the key policy changes. In February 2024, Alberta Premier Danielle Smith announced forthcoming policy and legislative changes imposing additional conditions for approval of new renewable energy projects; on March 11, 2024, the Alberta government released two new regulations under the Electric Utilities Act 1 ...

In August of 2023, the Alberta Government announced that it was pausing all new approvals of renewable energy (wind and solar) projects for six months pending a review by the Alberta Utilities Commission of various matters related to renewable energy development. With the pause expiring on February 27, the Alberta Government has formally announced the ...

On Aug. 3, 2023, the Alberta government announced a surprise seven-month moratorium on all new renewable energy projects, much to the surprise of the industry.. The government initially said its announcement was a response to requests from independent agencies that oversee the electricity system in Alberta, but successive revelations have proved ...

The Alberta government released an updated policy to guide wildlife and wildlife habitat application considerations for wind energy projects in Alberta on January 27, 2017. This policy is titled, "Wildlife Directive for Alberta Wind Energy Projects"; and can be found at:

Renewable Energy in Alberta Ag Dex 817-15 August 14, 2017 Farmers" Advocate Office farmers.advocate@gov.ab.ca 310-FARM (3276) ... advocate, the FAO does not create policy, but will provide comment on existing laws and policies and work as a liaison between landowners, industry, government, and regulators. ...

The Renewable Electricity Act provides for the development, implementation and funding of programs to incent the generation of renewable electricity in Alberta and requires the Minister to ensure that by the end of 2030 at least 30% of the electric energy produced in Alberta will be produced from renewable energy resources.

Alberta renewable energy policy

Surplus renewable energy can be converted to hydrogen and stored, which could help with renewable energy variability and uncertainty. Export market Alberta's future energy competitiveness includes the export market that would meet growing international demand in North America, the Indo Pacific, and European markets.

The Government of Alberta has outlined how it plans to regulate new renewable energy projects. Premier Danielle Smith, along with Affordability and Utilities Minister Nathan Neudorf, said the province is setting a "clear and responsible path forward" for the development of wind, solar, and other types of green power.
