

Apple air tag lithium battery

What battery does Apple airtags use?

Apple AirTags use a CR2032 lithium 3V battery, commonly called a coin battery. They're available at most electronics and drug stores, so it's pretty easy to obtain one. Just to be sure, check the packaging for a "Compatible with Apple AirTags" statement.

How do I replace my Apple airtag battery?

Apple uses a standard 3V CR2032 lithium coin battery that's available at hardware stores and plenty of online retailers, so you won't have to spend much time or money to find a replacement. Once you have the battery in hand, push the stainless steel side of the AirTag and rotate it counterclockwise. This will open the cover.

How do I know if my Apple airtag battery is bad?

The sustained functionality of the AirTag hinges on its lithium-ion battery. Here's how to find the Apple AirTag battery indicator and check its remaining energy for timely replacement, and replace the battery when the time comes. Typically, Apple sends a notification to your iPhone when your AirTag's battery runs low.

Do airtags need a new battery?

When you buy AirTags, they are immediately ready to use (and ready to pair with your Apple ID), but they will eventually need a new battery. Watch this video to see how to replace the battery in an AirTag. AirTags are not rechargeable, so the battery needs to be replaced when it gets low or dies.

How long do airtag batteries last?

This is quite helpful in comparison to Apple's rough estimate of one year, which might vary from one user to another. Every AirTag is powered by the commonly found CR2032 lithium 3V coin battery. So, you can swap your old battery with a new one effortlessly, provided you know the correct method to do it.

Which batteries fit my airtags?

To further discourage accidental ingestion, use a bitterant-coated CR2032 battery, like the Duracell 2032 Lithium Coin Battery with Bitter Coating. Look for packaging that states "Compatible with Apple AirTag". Some CR2032 batteries with bitterant coatings might not work with AirTag or other battery-powered products.

Duracell CR2032 won't work with Air Tag I was reading another thread discussing the fact that Duracell won't work with the Air Tags when replacing the battery. I began checking for this information after the Duracell I purchased yesterday wouldn't work when I tried them.

The FAA officially confirmed to The Points Guy that AirTags are safe and legal to be placed in checked luggage. "Luggage tracking devices powered by lithium metal cells that have 0.3 grams or less of lithium can be used on checked baggage," the FAA said. "Apple AirTags meet this threshold; other luggage tracking devices may not." Like any other lithium-ion battery ...

Apple air tag lithium battery

speaker. Battery. User-replaceable CR2032 coin cell battery. Sensor. Accelerometer. Accessibility. The Find My app is compatible with these iPhone accessibility features: VoiceOver Invert Colours Larger Text Compatibility with braille displays

An AirTag battery will last for a bit longer than a year, and your iPhone will warn you when that battery is low. But since you don't know how good your battery is anymore until you get to that point, that's potentially a big problem. Maybe you get the low battery warning in the first hour of your one-month ocean cruise, for instance.

That way when you get a "Replace AirTag battery" reminder, you can make an informed decision about whether you're close to the quoted 12 months or not. Still, whether you do it early, wait for Apple's notification, or only do it after you find that the battery has completely died, you're going to have to replace it at some point.
