

What is Oct/SEBS battery thermal management?

Oct/SEBS exhibits an excellent battery thermal management effect at low temperature. The performance of Li-ion batteries can degrade dramatically at cold ambient temperatures. The excess heat generated during battery operation can be stored by PCMs and then released at low ambient temperatures to insulate the battery.

Can Oct/SEBS composite PCM be used in a low-temperature battery thermal management system?

In this study, we prepared a novel Oct/SEBS composite PCM and applied it in a low-temperature Li-ion battery thermal management system. The prepared Oct/SEBS has good shape stability, a sufficiently high latent heat (187.7 J/g), and thermally induced flexibility properties.

Are battery thermal management systems at risk of thermal runaway?

This trend suggests a potential for quick heat buildup and concentration, raising concerns about the risk of thermal runaway in the battery. The distinct thermal characteristics present heightened challenges for the battery thermal management system.
