There is this XJW01 LCR bridge that is pretty cheap and does proper 4 wire measurements. In my experience it will measure small capacitors just fine. I have not tried inductors. Ideally you'd use an SMD test fixture but that alone will set you back around \$200. But a board will also work as a test fixture.

On the contrary, capacitors can increase the usability and probability of producing maximum power in an off-grid solar power system. The fastest-growing solar market introduces solar energy for remote places, and the off-grid system enables them to generate sufficient power for these isolated places where electricity is unavailable .
