The first step on the road to today's Li-ion battery was the discovery of a new class of cathode materials, layered transition-metal oxides, such as  $\text{Li}_x\text{CoO}_2$ , reported in 1980 by Goodenough and collaborators. 35 These layered materials intercalate Li at voltages in excess of 4 V, delivering higher voltage and energy density than  $\text{TiS}_2$ . This higher energy density, ...

Electrochemical energy storage (EcES), which includes all types of energy storage in batteries, is the most widespread energy storage system due to its ability to adapt to different capacities and sizes [1].
