Traditional medicine practitioners believe that deer antler can strengthen bones, treat nervous disorders, activate blood circulation, and replenish vital energy . Antlers are divided into three parts according to the degree of ossification: Top Antler Segment, Middle Antler Segment, and Deer Antler Base (hard antler plate) (Figure 1).

The deer absorbs the VFAs to use as an energy source for bodily processes, including body growth, heat generation and synthesis of critical chemicals (including proteins). The foods deer eat include browse, weeds and grasses, plus fruits and nuts in season. The digestibility of these foods will determine the amount of energy obtained from them.

And the dissolution rates for spray-dried deer blood, vacuum-dried deer blood, and marketed deer blood tablets were 85%, 81%, and 25.5%, respectively. The composition of the tablet produced from the freeze-dried deer blood was 56.4% protein, 18.7% lactose, 1.2% amino acids, 1.0% glucose, 0.7% lipids, 180 mg/100 g of iron, 13 mg/100 g of ...
