"The report focuses on a persistent problem facing renewable energy: how to store it. Storing fossil fuels like coal or oil until it's time to use them isn't a problem, but storage systems for solar and wind energy are still being developed that would let them be used long after the sun stops shining or the wind stops blowing," says Asher Klein for NBC10 Boston on MITEI's "Future of ...

Rapid growth and production of small devices such as micro-electromechanical systems, wireless sensor networks, portable electronics, and other technologies connected via the Internet of Things (IoT) have resulted in high cost and consumption of energy [1]. This trend is still projected to grow as the demand for connected technologies such as wireless sensors, ...
