How long does a vanadium flow battery last?

Vanadium flow batteries "have by far the longest lifetimes" of all batteries and are able to perform over 20,000 charge-and-discharge cycles--equivalent to operating for 15-25 years--with minimal performance decline, said Hope Wikoff, an analyst with the US National Renewable Energy Laboratory.

Which energy storage projects are incorporating vanadium flow batteries?

The CEC selected four energy storage projects incorporating vanadium flow batteries ("VFBs") from North America and UK-based Invinity Energy Systems plc. The four sites are all commercial or industrial facilities that want to self-generate power (like solar) and in some cases have the ability to operate off-grid.

Where do vanadium batteries come from?

There are large vanadium resources in the U.S. At present, 90% of the supply goes into steel manufacture. So, steel-producing regions like China are currently the largest producers of vanadium. In conclusion, Matt acknowledged that Li-ion batteries have proven that energy storage can be profitable, and VFBs have benefitted from the progress.

Are vanadium flow batteries recyclable?

With vanadium flow batteries, all parts and components have a recyclability factor close to 100%. The electrolyte can be processed and reused; 100% of the vanadium can be extracted and reused for other applications with no impact on primary mining. Also, these batteries contain no toxic metals such as lead, cadmium, zinc, and nickel.
