The BYD containerized Energy Storage System is rated at 250 kW (300 KVa) and 500 KWh with nominal output voltage of 415 VAC at a frequency of 50Hz and is outfitted with environmental controls, inverters and transformers, all self-contained, in a 40 foot shipping container to provide stable power supply.

The Office of Electricity's (OE) Energy Storage Division accelerates bi-directional electrical energy storage technologies as a key component of the future-ready grid. The Division supports applied materials development to identify safe, low-cost, and earth-abundant elements that enable cost-effective long-duration storage.

In the early 2010s, Lithium-Ion battery technology had developed sufficiently to surpass the earlier supercapacitors as the optimum choice for short-term storage of electrical energy in hybrid-powered equipment. In 2013, the first Hybrid Shuttle and Straddle Carriers with Li-Ion batteries were introduced.
