The main components of a typical flywheel. A typical system consists of a flywheel supported by rolling-element bearing connected to a motor-generator. The flywheel and sometimes motor-generator may be enclosed in a vacuum chamber to reduce friction and energy loss.. First-generation flywheel energy-storage systems use a large steel flywheel rotating on mechanical ...

Flywheels as mechanical batteries. Flywheel Energy Storage (FES) is a relatively new concept that is being used to overcome the limitations of intermittent energy supplies, such as Solar PV or Wind Turbines that do not produce electricity 24/7. A flywheel energy storage system can be described as a mechanical battery, in that it does not create electricity, it simply converts and ...
