Here's a complete definition of energy capacity from our glossary of key energy storage terms to know: The energy capacity of a storage system is rated in kilowatt-hours (kWh) and represents the amount of time you can power your appliances. Energy is power consumption multiplied by time: kilowatts multiplied by hours to give you kilowatt-hours.

The amount of battery storage required is based on your home's energy usage. Energy usage is measured in kilowatt-hours over some time--for example, a home requiring 1,000 watts for 10 hours per day = 10 kWh per day. When calculating, you need to consider the battery's performance and how much continuous output you require.
