you a lot of money.

Consider a 75kW compressor in operation. A staggering 94% of the total energy, which equates to 70kW, is not utilised and instead becomes wasted energy. Based on an average electricity cost of \$0.17/kWh, and the compressor running for 6,000 hours a year, leads to \$71,400 of energy wasted per year! Sounds bad right?

Energy conversion is the process of transforming one form of energy into another, such as heat, electricity, or mechanical work. Energy conversion can help reduce greenhouse gas emissions, improve energy efficiency, and lower operational costs for industries that use a lot of heat or power. Some examples of energy conversion technologies are:
