Battery energy storage systems (BESSs) have attracted significant attention in managing RESs [12], [13], as they provide flexibility to charge and discharge power as needed. A battery bank, working based on lead-acid (Pba), lithium-ion (Li-ion), or other technologies, is connected to the grid through a converter.

3. Compressed Gas Storage Liquid Air Energy Storage. Liquid air energy storage (LAES) stores liquid air inside a tank which is then heated to its gaseous form, the gas is then used to rotate a turbine. Compressed gas systems have high reliability and a long-life span that can extend to over 30 years.
