Energy storage technologies classification. 3.1. Mechanical Energy Storage System. Mechanical energy represents the energy that an object possesses while in motion (kinetic energy) or the energy that is stored in objects by their position (gravity energy). The exploitation of this type of energy using the power of heat, water,

Innovations in electric vehicle technology have led to a need for maximum energy storage in the energy source to provide some extra kilometers. The size of electric vehicles limits the size of the batteries, thus limiting the amount of energy that can be stored. Range anxiety amongst the crowd prevents the entire population from shifting to a completely ...
