Can PMMA brush-modified graphene be used for flexible energy storage?

The present work using PMMA brush-modified graphene as reinforcement has reached a relatively large dielectric constant, high breakdown strength and enhanced energy storage capacity with an ultra-low filler loading, showing potential values for flexible energy storage applications. Fig. 6.

What is the grafting efficiency of PMMA brushes?

The difference in weight loss is mainly attributed to the decomposition of PMMA brushes. Therefore, the grafting efficiency of PMMA can be simply determined to be 17.6 wt% in this study. The grafting of PMMA brushes can also be verified from element changes as shown from the XPS results in Fig. 2 e and Fig. S1.

Can a superstructured single-ion conducting polymer brush inhibit lithium dendrite growth?

However, severe safety issues arising from lithium dendrite growth have gripped the throat of the practical application of lithium metal batteries. Herein, a novel superstructured single-ion conducting polymer brush (CNF-g-PSSLi) is proposed as artificial solid electrolyte interphase (SEI) film to inhibit the lithium dendrite growth.

What is high-performance electrochemical energy storage?

Research on high-performance electrochemical energy storage has been pursued worldwide to fulfill the needs of emerging high-energy-demand applications, such as portable electronics, electric vehicles, autonomous aircraft, and grid storage 1, 2, 3, 4.

Can microscale lithium metal be stored inside cellular graphene scaffold?

Deng, W., Zhou, X., Fang, Q. & Liu, Z. Microscale lithium metal stored inside cellular graphene scaffold toward advanced metallic lithium anodes. *Adv. Energy Mater.* 8, 1703152 (2018).

Microbial fuel cells (MFCs) equipped with three-dimensional (3D) electrodes are widely used in wastewater treatment. However, the power output and energy storage of MFCs with 3D anodes are still limited in application. Here, a biocompatible, capacitive, and adhesive polypyrrole, carboxymethyl cellulose, carbon

Schematic showing power flow in FES system  $r_i$  and  $r_o$  and a height of  $h$ , a further expression for the kinetic energy stored in the rotor can be determined as  $E_{kin} = \frac{1}{4} \rho h (r_i^4 - r_o^4) \frac{1}{2} \rho v^2 A$ . (2) From the above equation it can be deduced that the kinetic energy of the rotor increases

The company is actively exploring opportunities in solar energy, energy storage, and other emerging renewable energy technologies. Wild Brush Energy Inc is committed to staying at the forefront of the renewable energy industry and is constantly looking for new ways to drive innovation and growth. With ever-growing energy demand, the energy density of conventional lithium-ion batteries based on graphite anode limits the development of long-range electric vehicles [1]. To further improve the energy density, lithium metal anode has received extensive attention because of the high theoretical capacity (3860 mAh g<sup>-1</sup>), light weight (0. ...

Leeward Renewable Energy's (LRE) Rabbitbrush Solar Facility, located in Kern County, California, completed construction and commenced commercial operations in November 2022. Rabbitbrush Solar Plus Storage Project is a 100-megawatt (MW) facility with a 20 MW/50 MWh battery energy storage system.

Energy storage systems act as virtual power plants by quickly adding/subtracting power so that the line frequency stays constant. FESS is a promising technology in frequency regulation for many reasons. Such as it reacts almost instantly, it has a very high power to mass ratio, and it has a very long life cycle compared to Li-ion batteries. ...

The Journal of Energy Storage focusses on all aspects of energy storage, in particular systems integration, electric grid integration, modelling and analysis, novel energy storage technologies, sizing and management strategies, business models for operation of storage systems and energy storage developments worldwide.
