Lithium batteries are becoming increasingly important in the electrical energy storage industry as a result of their high specific energy and energy density. The literature provides a comprehensive summary of the major advancements and key constraints of Li-ion batteries, together with the existing knowledge regarding their chemical composition.

An electric-hydrogen hybrid energy storage system (HESS) containing supercapacitors and hydrogen energy storage was established, and the deviation between the actual output of wind power and the expected target power was used as the flattening object, in which the supercapacitor bore the high-frequency fluctuation and the hydrogen energy storage ...

According to the above analysis, in the operation mode of DC hybrid distribution network, the characteristic parameters of source-load uncertainty in the process of distributed photovoltaic consumption are analyzed by demand response tracking identification method, and the load and photovoltaic output estimation model of distributed photovoltaic supportability ...

In the past few decades, electricity production depended on fossil fuels due to their reliability and efficiency [1]. Fossil fuels have many effects on the environment and directly affect the economy as their prices increase continuously due to their consumption which is assumed to double in 2050 and three times by 2100 [6] g. 1 shows the current global ...

An integrated survey of energy storage technology development, its classification, performance, and safe management is made to resolve these challenges. The development of energy storage technology has been classified into electromechanical, mechanical, electromagnetic, thermodynamics, chemical, and hybrid methods.

The choice of the entry mode is a key step of the formulation of an international strategy. Firms need to find the right approach to the host market, and to take decisions, which are coherent both with opportunities and risks of the external environment, and with the resources they can exploit.

Moderating variables. State ownership. Due to the differences in the choice of entry mode between SOEs and non-SOEs (Grøgaard, Rygh & Benito, 2019), we followed the study of Duanmu (2014) and used the actual proportion of state-owned shares of the firm to measure the degree of state ownership of the parent firms. Political affinity. Political relations ...
