Why do you need a solar inverter?

Solar inverters are the heart of a solar power system. They help convert incoming solar rays into usable energy. The right inverter can boost panel performance, improve energy production, and power your home more efficiently.

What is the Solar PV Inverter Buyer's Guide?

The Solar PV Inverter Buyer's Guide is a resource that provides information on the latest technology and new products from solar PV inverter manufacturers. Our annual Solar PV Inverter Buyer's Guide is a chance to check in with all of the inverter manufacturers - from the market leaders to the up-and-comers - to get a sense of how their technology has evolved.

Are solar inverters the same as charge controllers?

Note that solar inverters aren't the same as charge controllers; a different component is needed for solar battery storage. An inverter converts your energy, while a charge controller regulates electrical power for distribution to your solar batteries and solar energy system. Both devices are needed for battery performance.

Are battery electricity storage systems a good investment?

This study shows that battery electricity storage systems offer enormous deployment and cost-reduction potential. By 2030, total installed costs could fall between 50% and 60% (and battery cell costs by even more), driven by optimisation of manufacturing facilities, combined with better combinations and reduced use of materials.

How to choose a solar inverter?

The higher the energy loss, the lower the efficiency rating. Look for solar inverters with high efficiency ratings between 96% and 99%. Depending on the type, solar inverters will match either your system size or your panel size. The string inverters' maximum output capacity should match your system size.
