Supercapacitors are energy storage devices that store energy through a polarized electrolyte. Due to the fast ion adsorption/desorption and surface redox reactions, supercapacitors have the merits of fast charging rate and long cycle life, however, the low energy density severely limits the practical application of supercapacitors.

TES systems are divided into two categories: low temperature energy storage (LTES) system and high temperature energy storage (HTES) system, based on the operating temperature of the energy storage material
