In order to suppress the influence of power fluctuation in DC micro grid system, virtual DC motor (control is applied to DC converter for improving the stability of the system. However, the traditional virtual DC motor control with fixed parameters cannot take the dynamic response of the system into account.

At the same time, the larger energy storage systems are adopted by PHEVs to improve the electric driving range. However, the effect of braking energy recovery and pure electric driving range are affected by the performance of battery, because the battery is the primary energy source [9]. For meeting the high-power demand of vehicle, the battery ...

Abstract: Energy storage is an emerging technology that can enable the transition toward renewable-energy-based distributed generation, reducing peak power demand and the time difference between production and use. The energy storage could be implemented both at grid level (concentrated) or at user level (distributed). Chemical batteries represent the ...

Due to the excessive use of fossil resources, causing environmental pollution, how to develop green and low-carbon energy sources is particularly important [1], [2].Energy storage technology (EST) has largely solved the randomness and volatility of new energy power generation [3], [4] terms of the form, ESTs may be classified as: chemical energy storage ...

In this study, Sheppard-Taylor (S-T) converter and Pulse Width Modulated (PWM) Inverter-fed BLDC provide steady voltage across the BLDC motor drive independent of solar PV system power output. When renewable energy is scarce, the proposed battery-supercapacitor hybrid energy storage system (BS-HESS)

provides electricity.

The literature 9 simplified the charge or discharge model of the FESS and applied it to microgrids to verify the feasibility of the flywheel as a more efficient grid energy storage technology. In the literature, 10 an adaptive PI vector control method with a dual neural network was proposed to regulate the flywheel speed based on an energy optimization ...

The demand for small-size motors with large output torque in fields such as mobile robotics is increasing, necessitating mobile power systems with greater output power and current within a specific volume and weight. However, conventional mobile power sources like lithium batteries face challenges in surpassing the dual limitations of weight and output power ...

Flywheel energy storage system is a new energy storage technology. The existing technology is mainly based on ordinary high-speed motor as the main driving force lead to flywheel energy storage system is inefficient and can't reach the ideal energy conversion efficiency. The new type of 12 slot 8-pole high speed motor is designed based on the structure of a new flywheel ...

storage system together on the DC-side of the inverter, requiring all assets to be appropriately and similarly sized in order for optimized energy storage and power flow. Figure 1: Schematic of a PV system with AC and DC-Coupled energy storage 2 | DC- and AC-Coupled PV and Energy Storage Solutions

Powering frequently utilised DC loads like LEDs, laptops, and adjustable DC motor drives is where the DC microgrid truly shines. The DC microgrid, on the other hand, is constrained by substantial voltage differences between each converter and an unequal distribution of current among the converters, which leads to a lot of circulating current. The suggested distributed ...

1 Introduction. Brushless DC motor (BLDCM) is widely used in electric vehicles, industrial control and aerospace due to its high power density, compact size and simple structure [1-4] many applications, the battery is used as the main power supply, but there are some shortcomings of battery such as low power density, limited life cycle and so on [].
