The Inflation Reduction Act of 2022 (the "IRA") added and modified certain renewable energy tax credit provisions of the U.S. Internal Revenue Code of 1986, as amended (the "Code"). [1] The IRA additions included a new domestic content bonus credit under Code Sections 45, 45Y, 48, and 48E (the "Domestic Content Bonus Credit").Under these new rules, ...

Moreover, PCM microcapsules still have other potential applications such as solar-to-thermal energy storage, electrical-to-thermal energy storage, and biomedicine . Zhang et al. studied solar-driven PCM microcapsules with efficient Ti ...

Battery electricity storage is a key technology in the world's transition to a sustainable energy system. Battery systems can support a wide range of services needed for the transition, from providing frequency response, reserve capacity, black-start capability and other grid services, to storing power in electric vehicles, upgrading mini-grids and supporting "self-consumption" of ...

Latent heat storage systems use the reversible enthalpy change Dh_{pc} of a material (the phase change material = PCM) that undergoes a phase change to store or release energy. Fundamental to latent heat storage is the high energy density near the phase change temperature t_{pc} of the storage material. This makes PCM systems an attractive solution for ...
