Other types include bars, sheets, structurals, pipes, tubes, and more. Steel plate can be further divided into different types--including structural steel plate, HSLA steel plate, abrasion-resistant steel plate, and more--and are selected based on the physical and mechanical properties that result from their unique chemical compositions.

Since the early 2000's, Leeco Steel's expert Energy division has worked to supply manufacturers with the specific grades of steel plate needed in large quantities, delivered across North America. Steel plates used in the Wind Energy industry are dictated by standardization organizations; EN or ASTM standards.

It can be also seen from Fig. 11 that the liquid PCMs on the left and right sides of stainless steel fin plate was still blocked by the solid PCMs at 1200 s, and the natural convection space was limited, which further limited the improvement of heat transfer performance of the heat storage unit. For the discharging process, the heat transfer ...
