

# Facts about each planet

There are 5 officially recognised dwarf planets in our solar system, they are Ceres, Pluto, Haumea, Makemake and Eris. With the exception of Ceres, which is located in the asteroid belt, the other dwarf planets are found in the outer solar system. There are another 6 objects in our solar system that are almost certainly dwarf planets and there may be as many as 10,000.

Planet Facts for Kids. Our solar system consists of eight planets which all orbit around our home star, the Sun. In the image is Jupiter and one of the moons - image taken by the Juno space craft, a NASA space mission ... Summer and winter each take 21 years at the north and south poles! Neptune. Neptune is closely related to Uranus, the ...

KidZone Science Planet Facts Read some really neat facts about the planets in our solar system! Note: The fast facts on this page are appropriate for grades 1 to 3 while the "more about" links are appropriate for grades 4+. You can also check out all of our printable planetary worksheets to go with these fun facts. They're out of this world!

The cause is potentially twofold: firstly, the planet generates 2.6x the energy it receives from the Sun. Secondly, it's thought the cold temperatures on the planet actually help to reduce friction in the atmosphere, thereby allowing the winds to travel faster.

What is the order of the planets as we move out from the Sun? This is a simple guide to the sizes of planets based on the equatorial diameter - or width - at the equator of each planet. Each planet's width is compared to Earth's equatorial diameter. There's also a handy list of the order of the planets moving away from our Sun.

Facts about the Terrestrial Planets. The terrestrial planets in our solar system orbit relatively close to the Sun, this gives them their other name; the "Inner Planets" ... Each of the terrestrial planets has a central core made mostly of iron. The layer above the core is called the "mantle" and is usually made of silicate rocks. These ...

Our home planet Earth is a rocky, terrestrial planet. It has a solid and active surface with mountains, valleys, canyons, plains and so much more. Earth is special because it is an ocean planet. Water covers 70% of Earth's surface. Earth's atmosphere is made mostly of nitrogen and has plenty of oxygen for us to breathe.

Planet Facts Let's learn all about the planets of our solar system! There are eight planets in our solar system, but did you know there used to be nine of them? Let's dive right in and explore the planets. ... Our Solar System's planets each have ...

Facts about Jupiter. Jupiter is the fourth brightest object in the solar system. Only the Sun, Moon and Venus are brighter. It is one of five planets visible to the naked eye from Earth. ... Jupiter has the shortest day of all

# Facts about each planet

the planets. It turns on its axis once every 9 hours and 55 minutes. The rapid rotation flattens the planet slightly ...

The biggest planet in our solar system . explore; What Is the Weather Like on Other Planets? Each of the planets in our solar system experiences its own unique weather. explore; Is There Ice on Other Planets? Yes, there is ice beyond Earth! In fact, ice can be found on several planets and moons in our solar system.

Our solar system is made up of a star--the Sun--eight planets, 146 moons, a bunch of comets, asteroids and space rocks, ice, and several dwarf planets, such as Pluto. The eight planets are Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune. Mercury is closest to the Sun. Neptune is the farthest.

Even though there are only 8 official planets in the solar system, it can be tricky to remember them all in order from the Sun. A popular technique to use a mnemonic, which can be any sentence you want using the first letter of each planet. The letters for each word in the sentence must be M, V, E, M, J, S, U, and N.

3. All the planets in the Solar system have the same age. The planets in the Solar system are so different from each other that it is hard to believe they all share the same origin. But that's exactly the case. All the planets in the Solar system, including Earth formed more or less at the same time. This happened 4.6 billion years ago.

5 days ago&#0183; The solar system's several billion comets are found mainly in two distinct reservoirs. The more-distant one, called the Oort cloud, is a spherical shell surrounding the solar system at a distance of approximately 50,000 astronomical units (AU)--more than 1,000 times the distance of Pluto's orbit. The other reservoir, the Kuiper belt, is a thick disk-shaped zone whose main ...

Let's explore each planet in detail! Mercury. Mercury is the closest planet to the Sun, and the smallest planet in the solar system. It orbits the Sun faster than any other planet does. Mercury is a rocky planet that looks much like our moon, and it has so many craters. ... 45 Interesting Facts about Planets for Kids. Mercury is the second ...

Here are some fascinating facts about each planet to kick off your child's journey into the incredible world of space. What's a Planet? The International Astronomical Union (IAU) determines the official definition of a planet, and they've refined it somewhat over the years as more information about the solar system comes to light.

Planet Facts Let's learn all about the planets of our solar system! There are eight planets in our solar system, but did you know there used to be nine of them? Let's dive right in and explore the planets. ... Our Solar System's planets each have unique properties. For instance, whereas Jupiter is comprised of gas, Earth is formed of rock!

Read more for lesser known fun facts about planets. Did you know that Neptune was the first planet located through mathematical predictions? Read more for lesser known fun facts about planets. ... From the immense

# Facts about each planet

storms of Jupiter to the scorching surface of Venus, each planet has unique traits that are both fascinating and surprising.

Our Solar System includes the Sun and the planetary system revolving around it. A "planetary system" is a group of non-stellar objects (planets, dwarf planets, moons, asteroids, meteoroids, comets and cosmic dust) that orbit around a star, the sun is classified as a star. The Solar System includes four terrestrial planets (composed of rock and [...])

The planets of the solar system are grouped into three categories, based on their size and composition: They are gas giants (2), ice giants (2), and terrestrial planets (4 - including Earth). Key Facts & Summary. The biggest planets in the Solar System are ...

Since the beginning of time, humans have been fascinated by the planets in outer space. This website, provides facts about the planets which will amaze and interest you. As well as facts, we offer a range of other things, such as pictures, history, wallpapers and more.

One of five planets visible with the naked eye a, Mercury is just 4,879 Kilometres across its equator, compared with 12,742 Kilometres for the Earth. Mercury is the second densest planet. Even though the planet is small, Mercury is very dense. Each cubic centimetre has a density of 5.4 grams, with only the Earth having a higher density.

The Nine Planets is an encyclopedic overview with facts and information about mythology and current scientific knowledge of the planets, moons, and other objects in our solar system and beyond. The 9 Planets in Our Solar System. Mercury.
