Dry gravity energy storage (D-GES) is a novel and promising energy storage technology. ... By using established construction and power element prices the study demonstrates that capex can be reduced to less than 600 \$/kW·h for discharge durations of 4 h or more, and can decrease to nearly 450 \$/kW·h for a 10-h discharge duration.

where m_i is the mass of the i th object in kg, h_i is its height in m, and $g = 9.81 \text{ m/s}^2$ is the acceleration due to gravity.. As of 2022, 90.3% of the world energy storage capacity is pumped hydro energy storage (PHES). [1] Although effective, a primary concern of PHES is the geographical constraint of water and longer term scalability.

The Austrian IIASA Institute [] proposed a mountain cable ropeway structure in 2019 (Fig. 2), an energy storage system that utilizes cables to suspend heavy loads for charging and discharging, and can reduce the construction cost by utilizing the natural mountain slopes and adopting sand and gravel as the energy storage medium. However, the capacity of the cable ...
