Hitachi Energy introduced its first offerings in 2021, and the company plans to provide a complete SF6-free portfolio across the entire high-voltage switchgear range in the coming years. The latest breakthrough was achieved in August 2022 with the introduction of the 420 kV (63 kA) SF6-free circuit-breaker.

The voltage transformer lowers the operating voltage of the substation down to values suitable for connected measuring instruments and protective equipment. The implementation of the voltage transformers on each pole allows the individual measurement for each phase. Inductive voltage transformers are used in the Dead Tank Compact circuit breaker.
