In an era where energy independence is increasingly valued, DIY battery banks have emerged as a viable solution for individuals seeking autonomy over their power supply. These self-assembled systems allow users to store energy generated from renewable sources like solar panels or wind turbines, providing a reliable backup during outages or a ...

I think this will become a common method in the future because a battery that doesn't work well for an electric vehicle might still be a good fit for a battery energy storage system (BESS), since the charge and discharge rates are so much lower in a BESS compared to an EV. Typically a BESS uses much lower power compared to an EV that needs to ...

@batalto I'd love to add some low level shed/garage DIY solar into the mix but unfortunately my garden is rather well enclosed by nearby woodland . Panels could certainly be installed on the rear south east roof but even in mid summer it's mostly shaded until 11am. The trees are covered by a TPO and the council have refused permission for removal/reductions.
