

Honeycomb wind turbine

Instead of the familiar towering structures with rotating blades, picture a compact, hexagonal grid resembling a honeycomb, perched atop urban buildings or integrated into existing structures. This is the essence of Katrick's design - a radical departure from traditional wind turbines, both in form.

Glasgow-based startup Katrick Technologies is revolutionizing the renewable energy sector with its innovative bladeless honeycomb wind turbines. Departing from the familiar sight of towering turbines with spinning blades, Katrick's design features a compact hexagonal grid resembling a honeycomb.

Glasgow-based startup Katrick Technologies is introducing a groundbreaking innovation in wind energy: bladeless honeycomb wind turbines. This new design promises to be more efficient, sustainable, and suitable for urban environments, potentially turning rooftops into local power stations.

From the breezy slopes of Scotland emerges an innovative approach to renewable energy: the bladeless "honeycomb" wind turbines by Katrick Technologies. This Glasgow-based startup is a hub of creativity, reshaping the trajectory of our future energy terrain.

Katrick Technologies' new wind farm, with an innovative honeycomb design, offers a compact and less invasive solution, ideal for urban areas, which reduces costs and environmental impact. Gianluca Riccio. December 21 2023.
