

Critical Kernel-Power, Event ID 41, Task Category: (63) Hi it's been a while (first date 27 July 2024) that only when I play my PC resets with event ID 41, I'm asking you for advice (I've already followed all your guide), before you ask I haven't changed any parts recently and the PSU I changed about 2 years ago and never gave any problems ...

Based on the information you have provided, the problem you are experiencing with &quot;Event 41, Kernel Power&quot; is usually related to system instability or hardware failure. This issue may cause the computer to restart unexpectedly while performing certain tasks. To help you resolve this issue, I suggest you try the following steps:

Log Name: System Source: Microsoft-Windows-Kernel-Power Date: 22/11/2020 20:13:26 Event ID: 41 Task Category: (63) Level: Critical Keywords: (70368744177664),(2) User: SYSTEM Computer: DESKTOP-KOHU5V1 ... Event ID 41 Kernel Power Issue Log Name: System. Source: Microsoft-Windows-Kernel-Power ...

4. The power cable between the mains power socket and the computer becomes disconnected at either end. 5. A power surge or lightning strike occurs. Your computer should connect to an uninterruptible power supply unit, which then connects to the mains supply. If an incident occurs you will have to reset the uninterruptible power supply unit.

Now click on the blue link, "change advanced power settings". Find "hard disk" in the menu and turn it off by typing in "0" into the box. Make sure to hit apply! Now find "sleep" in the menu and also turn it off by typing in "0". Make sure to ...

Hi ShyDuck, I'm Dyari. Thanks for reaching out. I will be happy to assist you in this regard. Kindly check C:\Windows\Minidump and copy available minidump files to the desktop then share them via One Drive or Google Drive in order to be analyzed and indicate which file is causing the crash.

The Windows 10 error Event ID 41 "Kernel-Power" is about power and isn't a Windows issue at all you'll be pleased to know. What you may not be so pleased to hear is that it is usually a sign of a faulty PSU or power input. If you need to fix Windows 10 error Event ID 41 "Kernel-Power", here's what you can do.

Log Name: System Source: Microsoft-Windows-Kernel-Power Date: 24/06/2024 23:44:54 Event ID: 41 Task Category: (63) Level: Critical Keywords: (70368744177664),(2) User: SYSTEM Computer: DESKTOP-B8MCHEU Description: The system has rebooted without cleanly shutting down first.

what power plan are you running in settings/system/power, click on the Additional power settings link under related settings? Are you on high performance? i see lots of pc that can cope with running full speed but crash at idle, it seems odd to me. you might want to run HWINFO and log system performance to see if any sensors offer a clue.

Log Name: System Source: Microsoft-Windows-Kernel-Power Date: 31/03/2024 6:37:45 pm Event ID: 41 Task Category: (63) Level: Critical Keywords: (70368744177664),(2) Description: The system has rebooted without cleanly shutting down first.

I have a windows 10 pro x64bit operating system with version 21H2 windows update (november 2021.) I have tried to update it, tried disabling fast startup, change power settings, disabled automatic restart and everything I found on internet and the problem persists.

Welcome to the Microsoft Community! Thank you for your detailed information. Kernel-Power Event ID 41 does indicate that the system restarted without shutting down completely. You have taken many effective steps to troubleshoot the problem. Regarding your issue, the old WIFI driver may indeed cause system instability, but we need to confirm ...

Kernel Power 41 Critical errors are usually caused by a power problem, possibly the PSU on your PC. Please check to see if your PC is producing any minidump files, I will check those to see if they provide any insight into a potential cause of the system crashes. Open Windows File Explorer. Navigate to C:WindowsMinidump
