Will a large-scale energy storage system be needed?

No matter how much generating capacity is installed, there will be times when wind and solar cannot meet all demand, and large-scale storage will be needed. Historical weather records indicate that it will be necessary to store large amounts of energy (some 1000 times that provided by pumped hydro) for many years.

What is the alternative to large-scale intra-day electricity storage?

The alternative to large-scale intra-day electricity storage is to have a significant over-supply of renewable electricity generating capacity and to curtail generation at times of low demand. To use this approach, the UK would need an additional 16GW of offshore wind generating capacity (1300 x 12MW turbines) on a typical day.
