Much of the price decrease is due to the falling costs of lithium-ion batteries; from 2010 to 2016 battery costs for electric vehicles (similar to the technology used for storage) fell 73 percent. A recent GTM Research report estimates that the price of energy storage systems will fall 8 percent annually through 2022.

The 2022 Cost and Performance Assessment analyzes storage system at additional 24- and 100-hour durations. In September 2021, DOE launched the Long-Duration Storage Shot which aims to reduce costs by 90% in storage systems that deliver over 10 hours of duration within one decade. The analysis of longer duration storage systems supports this effort.

The installed capacity of battery energy storage systems (BESSs) has been increasing steadily over the last years. These systems are used for a variety of stationary applications that are commonly categorized by their location in the electricity grid into behind-the-meter, front-of-the-meter, and off-grid applications [1], [2] behind-the-meter applications ...
