State-of-the-art cryogenic tanks for LH 2 storage originate from the storage tank developed for LN 2 with barely any changes. Perlite and a vacuum of ~10 -2 mbar are used for insulation and give a k-value of ~1.0 mW/m²K. The typical boil-off loss of current LH 2 tanks varies from 1% to 5% per day . In practice, it has become more and more ...

For Hot Water Thermal Energy Storage, Caldwell not only offers the ability to use traditional tank storage, but also the opportunity to gain a pressurized solution. Because we build these tanks using an ASME Pressure Vessel, we can store Hot Water at elevated pressures and temperatures, thereby reducing the total storage capacity.
