year, while it has already delivered systems of unspecified size and capacity to two of the Philippines islands, Luzon and Visayas.

remote islands with limited means can navigate the journey to a low-carbon energy future. The Marshall Islands is highly dependent on imported diesel and faces significant fuel and transportation costs. Around half of our GHG emissions come from burning diesel for electricity. While many of our outer islands

Curtiss-Wright's Flash Storage Module 2 (FSM-2) provides 2 TB of rugged, removable storage with a 100K insertion connector that supports long program life. In a 1" pitch 3U format, the FSM-2 is a TRL level 9 commercial off-the-shelf (COTS) storage solution that can lower schedule and technical risk for deployed storage applications.

The Legacy of U.S. Nuclear Testing and Radiation Exposure in the Marshall Islands [1] The survey focused on assessing the degree of fallout contamination across the Marshall Islands, and included in-situ gamma spectrometry measurements of over 400 islands as well as sampling and radiometric analysis of native food products and more than 800 surface soil samples.
