

Does China have a peak-shaving demand for gas storage?

Moreover, the total capacity of China's UGS is far below the world's average. Therefore, in order to meet the ever-increasing demand for peak load shaving of NGM, China must accelerate the pace of gas storage construction. In this study, we perform a comprehensive review of the peak-shaving demand of the NGM and the UGS development in China.

How can natural gas peak shaving be regulated?

The imbalance between supply and demand leads to an inevitable problem: natural gas peak shaving regulation (Emenike and Falcone, 2020). Currently, the most three effective ways for peak shaving regulation are underground gas storage (UGS), liquefied natural gas (LNG), and gas field peak shaving (Ma et al., 2020).

What are the disadvantages of peak regulation of LNG?

However, peak regulation of LNG still has some disadvantages, for example, high unit investment cost and high operating cost [95]. Gas storage at the end of the gas pipeline and the urban high-pressure pipeline storage are both included in the peak regulation by gas pipeline [96].

What is the peak regulation principle of LNG?

The peak regulation principle of LNG is similar to that of the underground gas storage. However, LNG facilities are located on the ground, and a fixed location is not required [93]. Thereby, a suitable site can be chosen by LNG suppliers according to their own preference.

What percentage of natural gas demand is peak-shaving?

The proportion of peak-shaving demand in NGC was 8%~10% at the end of the "Twelfth Five-Year Plan" and will be 12%~15% in 2020. The seasonal demand difference is more obvious in north China. Take Beijing as an example, the natural gas in this area is mainly consumed by heating and power generation, and the NGC is very high.

Do gas-fired power plants participate in peak regulation?

However, two problems are confronted by gas-fired power plants when participating in the peak regulation of the power system. Firstly, there are problems within the capacity mechanisms and peak regulation ability of gas-fired power plants.

Through the continuous promotion of policies such as "coal to gas" and "oil to gas", it is expected that by 2030, urban gas consumption will reach a peak of 170 Bcm, industrial fuel gas demand will reach a peak of 180 Bcm, the consumption of natural gas used for power generation will exceed 250 Bcm and continue to grow before 2040, and ...

# Natural gas storage peak regulation policy

1 Demonstrated peak capacity, otherwise known as the maximum demonstrated working natural gas volume, is the sum of the highest storage inventory levels of working natural gas observed in each distinct storage reservoir during the previous five-year period as reported by the operator on Form EIA-191, Monthly Underground Natural Gas Storage ...

Italy Natural Gas Security Policy - Analysis and findings. An article by the International Energy Agency. ... EU regulation requires that storage facilities are filled at 90% level by 1 October starting in 2023. About 4.6 bcm of Italy's 19.04 bcm total natural gas storage capacity is dedicated to the strategic gas reserves. However, there are ...

China has been reforming its domestic natural gas market in recent years, while construction of storage systems is lagging behind. As natural gas accounts for an increasing proportion due to the goal of carbon neutrality, large-scale gas storage appears to be necessary to satisfy the needs for gas peak shaving and national strategic security. Additionally, the ...

periods of extreme or peak demand. LNG storage can be built in areas where the geology does not provide ... supply is available for that province's natural gas consumers. Canadian Storage Regulation. The regulation of storage facilities in Canada falls under ... NATURAL GAS STORAGE AND AFFORDABLE AND RELIABLE ENERGY SERVICES . 0 100 200 300 ...

After providing Administration-wide support to the state response effort, in early 2016, the Obama Administration convened a new Interagency Task Force on Natural Gas Storage Safety in the wake of the nation's largest ever natural gas storage leak at SoCalGas's Aliso Canyon facility.

The multilevel natural gas storage and peak regulation system aims at the establishment of UGS and coastal liquefied natural gas (LNG) receiving stations as the main work. ... it needs to increase the consumption capacity of renewable energy through underground energy storage systems and improve the policy support for technology research and ...

In the case of natural gas storage, Chaton et al. (2008) analyze optimal depletion of gas reserves in various scenarios, and particularly, the opportunity for regulatory authorities to maintain safety stocks. ... Therefore, we consciously do not consider the non-stationary aspect of gas demand schedule (peak and load), because we focus on the ...

FERC is responsible for authorizing the siting and construction of onshore and near-shore LNG import or export facilities under Section 3 of the Natural Gas Act. Additionally, FERC inspects peak-shaving, LNG satellite, and vehicular fuel LNG plants connected to the interstate gas transmission system. The Commission, under Section 7 of the ...

The typical peak load regulating measures of natural gas include underground gas storage (UGS), liquefied

natural gas (LNG) receiving station and gas field adjustment [34,35]. Among them, the anti-risk ability of the LNG receiving station adjustment is weak, since numerous external factors affect the operation, such as supply source ...

Natural gas security is one of the core components of energy security, and is an important component part of national security. Experience in many nations has shown that the establishment of a robust natural gas storage and peak shaving system is an effective means to address short-term and mid-term natural gas supply halts and to ensure natural gas industry ...

Storage facilities are most concentrated in the consuming north east region of the country, but can be found nationwide. For a summary of natural gas storage facilities by state, [click here](#) to see the EIA's storage statistics. To learn more about natural gas storage in general, [click here](#) to visit the Gas Technology Institute. [Click here](#) to visit the Energy Information Administration's ...

Basics of Natural Gas Regulation Part 1 Overview of Natural Gas Systems ... withdrawn from storage during periods of peak demand. o It may also be used by transportation companies to ... BiH REAP - Overview of Natural Gas Systems, Feb. 2008 . 29 . Cushion Gas o The gas required in a reservoir, used for storage of natural gas, so that ...

There are more than 170 LNG facilities operating in the U.S. performing a variety of services. Some facilities export natural gas from the U.S., some provide natural gas supply to the interstate pipeline system or local distribution companies, while others are used to store natural gas for periods of peak demand. There are also facilities which produce LNG for ...

Liquefied natural gas (LNG) is natural gas that has been cooled to a liquid state, at about -260°F; Fahrenheit, for shipping and storage. The volume of natural gas in its liquid state is about 600 times smaller than its volume in its gaseous state. This process makes it possible to transport natural gas to places pipelines do not reach.

As energy demand continues to grow, the enhancement of natural gas storage and peaking capacity has become an important measure to ensure national energy security and to achieve the goals of carbon peaking and carbon neutrality. Gas storage and peaking have mature development models in the international arena, and China is making every effort to ...

In 2014, China's natural gas apparent consumption reaches 183 billion m<sup>3</sup>, with underground storage peak shaving volume of 4.2 billion m<sup>3</sup>, making peak shaving volume account for less than 3% of total natural gas consumption, thus meaning that peak shaving capabilities are severely lacking.

The development of natural gas power generation and the enhancement of the flexibility of power system are of great significance to promote the large-scale development of renewable energy, improve the quality of

atmospheric environment in China and actively respond to climate change and promote the development of natural gas industry, especially in the ...

2.1 Current Situation of Gas Storage Capacity Construction 2.1.1 Underground Gas Storage. UGS storage has two main functions: firstly, to regulate the imbalance of gas consumption, to cut peak and fill valley. When the natural gas market gas consumption in summer is lower than the pipeline gas transmission capacity, the surplus gas is injected into the storage.

Therefore, the normal operation time of the natural gas pipeline network considering the gas storage is 40% longer than that without considering the gas storage. It shows that the peak regulation function of the gas storage is beneficial to improve the service capacity of the pipeline and delay the time point when the transformation needs to be ...

ciency of North American natural gas markets and to ensure adequate and reliable supplies of energy for consumers. In making his request, the Secretary made reference to the 1992 and 1999 NPC natural gas studies, and noted the considerable changes in natural gas markets since 1999. These included "new concerns over

And it also concluded that the UGS will play a significant role in the politics and economy of the future. 7 According to Ren et al., the seasonal peak-shaving volume of natural gas in the United States in 2019 was 63.9 billion cubic meters (bcm), which was defined as the accumulated difference between the consumption of each month and the ...
