The CyberPower UPS System comes with 1,500VA and 1,000W PFC sine wave battery backup. Designed to support active PFC and conventional power supplies, it can safeguard computers, workstations, network devices, and telecom equipment. It has 12 outlets total, 6 with battery backup and surge protection and 6 with just surge protection.

A UPS works by converting AC power to DC power and storing it in a battery. Then, it converts the DC power back to AC power, running it to your building's AC outlets. Your connected devices will continue to operate on the stored battery power, giving you time to save your work and shut down the computer.

Significant cost is a reason why companies wait so long before replacing their generators. This could lead to a failure in backup power as the old generator might not turn on, resulting in power loss to the data center. At this writing, lead times of 18 to 24 months are not unusual, so waiting too long could be disastrous to data center backup ...
