Amazing! I love looking at the night sky, but unfortunately haven't had the chance to see the real night sky. We could see a pretty good amount of stars where I grew up since it was in the middle of nowhere, but nothing like this! We just went to the Sedona and Grand Canyon and were hoping to see a great night sky, but sadly there was a full ...

Night sky real

Stars in the night sky. The night sky is the nighttime appearance of celestial objects like stars, planets, and the Moon, which are visible in a clear sky between sunset and sunrise, when the Sun is below the horizon.. Natural light sources in a night sky include moonlight, starlight, and airglow, depending on location and timing. Aurorae light up the skies above the polar circles.

One of the easiest ways to identify the brightness of your night sky is to use the Bortle scale. A light pollution map will show that a large city radiates white to red from the center, and rural areas will appear green to blue. These colors represent the amount of artificial light in the area, and how bright the night sky will look.

Night sky photography can be an expensive hobby, but it doesn't have to be. The essentials are just a digital camera, a lens that can open up to a wide aperture to collect more light, and a tripod for stability. (With lenses, look for ones with an aperture or "f number" of at least f/3.5. Numbers even lower, like f/1.8, are best, because they ...
