

Implementing large-scale commercial development of energy storage in China will require significant effort from power grid enterprises to promote grid connection, dispatching, and trading mechanisms, and also share the responsibility of the regulatory authority for energy storage safety risks to ensure the high-quality application of energy ...

On March 21, the National Development and Reform Commission (NDRC) and the National Energy Administration of China issued the New Energy Storage Development Plan During China's "14th Five-Year Plan" Period. The plan specified development goals for new energy storage in China, by 2025, new energy storage technologies will step into a large ...

However, the intermittent nature of renewable energy requires the support of energy storage systems (ESS) to provide ancillary services and save excess energy for use at a later time. ESS policies have been proposed in some countries to support the renewable energy integration and grid stability.

Focusing on technological advancements, market evolution, and the current business case for storage, we will discuss how storage is already being used to support reliable power supply, what makes it cost-effective, and how its development will play a strategic role in Asia's clean energy transition. Join this session to find out more about ...

2025 Agenda. Our team is hard at work curating an agenda for the 2025 Summit. If you would like to present a case study or be part of a panel session at our Energy Storage Summit Asia, then please get in touch with the team today. The World's Leading Energy Storage Event Series. Unlike other storage conferences, proceeds from the event help ...

The energy storage market presents significant opportunities for foreign investors, especially technology providers. China has set goals to boost its non-pumped hydro energy storage capacity to around 30GW by 2025 and 100GW by 2030 - a more than 3000 percent increase from 3.3GW in ...

China is proposing a policy to accelerate energy storage deployments, with its core a target to take the country's storage capacity excluding pumped hydro to 30GW by 2025 - triple the level of Wood Mackenzie's current forecast.
