

Why do we need perovskite solar cells?

Abstract In recent years, the perovskite solar cells have gained much attention because of their ever-increasing power conversion efficiency (PCE), simple solution fabrication process, flyable, light-weight wearable and deployable for ultra-lightweight space and low-cost materials constituents etc.

Can perovskite photovoltaics be integrated with other systems?

Integrating perovskite photovoltaics with other systems can substantially improve their performance. This Review discusses various integrated perovskite devices for applications including tandem solar cells, buildings, space applications, energy storage, and cell-driven catalysis.

Are perovskite solar cells a viable alternative to silicon based solar cells?

Until now, third generation silicon based solar cells are dominating with large power conversion-efficiency (PCE) of 25-26%. Nevertheless, new classes of third-generation solar-cells termed as perovskite solar-cells are an alternative for silicon solar-cells which can exhibit the PCE of 22.1% [,,].

Could perovskite formulations solve the degradation problem for lightweight photovoltaics?

A new approach to identifying useful formulations could help solve the degradation issue for these promising new lightweight photovoltaics. Researchers have developed a new way to test long-lasting perovskite formulations that could be used for solar cells.

How efficient is perovskite power conversion?

At the time of writing, the record perovskite power conversion efficiency, reported by the Chinese Academy of Sciences in late 2018 and certified by the National Renewable Energy Laboratory, is 23.7% (ref. 6).

Can 2D/3D bi-layered perovskites produce a highly stable photovoltaic device?

Recently, few research groups reported the fabrication of 2D/3D bi-layered perovskites for generating highly-stable photovoltaic device. Until now, the PCE of 20.75% can be achieved by the reported techniques in which bulk cation is deposited on preformed 3D-perovskite surface to produce in situ evolution of 2D-layer.

Future of perovskite solar cells looks very bright, but regardless of prospective success in the area of photovoltaics, research activities for various application domains of perovskite materials are bound to progress further, granted by the sheer number of possible substituent combinations within their structures.

Device optimization strategies for wide-gap perovskite PV (PPV) materials and associated interlayers as used in single-junction or tandem solar cells offer a promising starting point for IPV applications and a substantial amount of existing knowledge is at hand to be readily employed to perovskite IPV's.

Over the last several years, inorganic-organic hybrid perovskites have shown dramatic achievements in

photovoltaic performance and device stability. Despite the significant progress in photovoltaic application, an in-depth understanding of the fundamentals of precursor solution chemistry is still lacking. In *Advances in Solar Energy Conversion*

Solar cell based on CsRbFA triple cation perovskite with a polymer layer degraded from the initial efficiency of 18.74% to 17.63% within the 3 h and then linearly reduced to 17.51% at 1000 h, under continuous maximum power point (MPP) tracking in ...

The article also explores non-photovoltaic applications, such as LEDs, thermoelectric devices, and solid oxide fuel cells, showcasing the versatility of perovskite materials. ... Figure 14 shows the schematic diagram of the perovskite solar cell. The process of making perovskite solar cells (PSCs) is sequential. An electron transport layer, a ...

Organic-inorganic perovskites used for photovoltaics have an AMX_3 structure where A is a monovalent cation such as Cs, methylammonium (MA), or formamidinium (FA), M is a divalent metal such as Pb or Sn, and X represents halide anions. A stable 3D perovskite can be formed only when the Goldschmidt tolerance factor (t) is in the range of ~ 0.8 -1 based on a ...

The introduction of perovskite materials innovates various fields of optoelectronics including photovoltaic solar cells, photodetectors, light-emitting devices, and many more. This virtual collection on "Emerging Perovskite Materials and Applications" highlights the best contributions in these fields published in *Small Structures*. Our ...

Lead-free perovskites are among the compounds that are currently the most investigated for their potential application in photovoltaics because of their nontoxic effect on the environment. In this work, we report the structural, electronic, and optical properties of hybrid organic-inorganic FAMgI₃-based perovskite for use in photovoltaic technology. We use ...

1 Introduction. Perovskite solar cells (PSCs) render tremendous potential in photovoltaics (P.V.s) because of their superior power conversion efficiency (PCE), [] low processing temperature ($<150\text{ }^\circ\text{C}$), [] and cost-effective fabrication. [] For the first time in 2009, the organic-inorganic hybrid perovskites were used as the sensitizers in dye-sensitized solar cells by Kojima, which led to a ...

To promote the commercial applications of perovskite solar cells into space, the challenges like light instability, thermal cycling stress and vacuum-induced issues are discussed. ... MicroLink Devices display their best triple junction space solar cell with an excellent efficiency of 37.75%, featuring the similar unpackaged specific power of 3 ...

The structure of perovskite solar cells differs slightly from the classical structure of Al-BSF c-Si solar cells. Perovskite solar cells can be manufactured using conventional n-i-p or p-i-n architecture, sandwiching the perovskite absorber layer between a Hole Transporting Layer (HTL) and an Electron Transporting Layer

(ETL).

Commercial applications outside the power sector may tolerate a shorter operational life, but even these would require improvements in factors such as device stability during storage. ... In small-area lab devices, perovskite PV cells have exceeded almost all thin-film technologies (except III-V technologies) in power conversion efficiency ...

Perovskite Photovoltaics and Optoelectronics Discover a one-of-a-kind treatment of perovskite photovoltaics In less than a decade, the photovoltaics of organic-inorganic halide perovskite materials has surpassed the efficiency of semiconductor compounds like CdTe and CIGS in solar cells. In Perovskite Photovoltaics and Optoelectronics: From Fundamentals to ...

Photovoltaic technology is then used to convert solar energy into electricity and the Perovskite materials are found to be one of the most promising materials for photovoltaic applications. Designing and synthesizing perovskite structure was a recent trend because of its numerous applications in photocatalysts, fuel cells, photovoltaics and so on.

We welcome further scientific understanding of the role of PNCs in benefitting perovskite solar cell performance. Zheng et al. attempted to separate the contributions of ligands and excess ions from PNCs by adding ligands, ... Heterojunctions using PNCs and 2D MHPs are being used in applications beyond photovoltaics. Often, new semiconductor ...

Soon after, Jiang et al. proposed organic Pb-based tri-halide perovskites, which has shown tremendous success in solar cell applications [29]. The structure information of $\text{CH}_3\text{NH}_3\text{PbX}_3$ ($\text{X} = \text{Cl}, \text{Br}, \text{and I}$) ... The perovskite solar cell devices are made of an active layer stacked between ultrathin carrier transport materials, such as a hole ...

Auger recombination dominates at higher carrier densities (e.g., $>10^{17} \text{ cm}^{-3}$) and can be reduced by compositional modulation and hence it has relatively little effect on photovoltaic applications, while trap-related non-radiative recombination is related to the perovskite film quality and the interface between the absorber and ETL/HTL.

Kumar et al. have used 20 mol% SnF_2 additives to modulate the high p-conductivity of CsSnI_3 and showed a solid-state perovskite solar cell with a photocurrent density of 22 mA cm^{-2} . The addition of Ge to limit the oxidation of Sn has also shown ... The devices were completed by application of carbon paste ElectroDAG 440B from ...

This is a very attractive feature for solar cell applications, since it allows for devices with a specific color, ... The integration of perovskite into a 2-J tandem solar cell (TSC) can be obtained for instance by using the MAPbI_3 system (1.55-1.60 eV) or other higher-bandgap perovskites as the photoactive material for the top cell ...

Recently, solar cells based on hybrid perovskites have become increasingly attractive for low-cost photovoltaic applications since the demonstration of viable devices (~10% efficiency in 2012) [10, 11]. Perovskite solar cells have now reached 24% single-junction efficiency [12]. Perovskites are promising candidates for photovoltaic applications due to their favorable ...

"Improved air stability of perovskite solar cells via solution-processed metal oxide transport layers". Nature Nanotechnology. 11 (1): 75-81. Bibcode: 2016NatNa..11...75Y. doi: 10.1038/nnano.2015.230. PMID 26457966.
