However, in recent years some of the energy storage devices available on the market include other integral components which are required for the energy storage device to operate. The term battery system replaces the term battery to allow for the fact that the battery system could include The energy storage plus other associated components.

For example, residential grid-connected PV systems are rated less than 20 kW, commercial systems are rated from 20 kW to 1MW, and utility energy-storage systems are rated at more than 1MW. Figure 2. A common configuration for a PV system is a grid-connected PV system without battery backup. Off-Grid (Stand-Alone) PV Systems
