

Power backup usp-rps

What is a power backup system?

These automated electric systems usually power appliances requiring electricity in case of power disruption, namely, lights, elevators, personal electronic devices, and other complementary electricity-dependent systems like fire emergency systems. Nevertheless, minor to medium-sized enterprises can also use such power backups to run their programs.

What is a backup power supply (UPS)?

A backup power supply (UPS) provides guaranteed power protection for connected electronics. When the electricity suddenly cuts out or fluctuates beyond acceptable levels, an uninterruptible power supply (UPS) will kick in and offer renewable backup battery power and surge power protection to any connected sensitive equipment.

What are the benefits of USP-RPS redundant power system?

I can only see one benefit of the USP-RPS Redundant Power System: If your UI device's internal power fails, your device will keep running until you are ready to replace it. I can see two other minor benefits: You will get a notification that your device (s) are no longer receiving primary power. Am I missing anything else?

How does the USP-RPS work?

The USP-RPS continually monitors all attached devices. In the event of an internal AC/DC power supply failure, failover is automatic so your network continues to operate with no interruption in service. With a 950W DC power budget, the USP-RPS can protect a variety of high-power devices, including UniFi PoE switches.

How much power does a USP-RPS have?

With a 950W DC power budget, the USP-RPS can protect a variety of high-power devices, including UniFi PoE switches. An integrated 1.3" color touchscreen LCM displays system information for convenient monitoring. Looking for specific info?

How do I connect a USP cable to a UNIFI device?

The LED lights up blue when there is an active power connection. Connect the included USP Cable to a UniFi device with a USP Connect DC input. (Additional USP cables are sold separately as model USP-Cable.) Connect the included Power Cord to the Power port. For indoor applications, use Category 5 (or above) UTP cabling approved for indoor use.

The UniFi® SmartPower Redundant Power System, model USP-RPS, is a proprietary redundant power system designed to protect up to six UniFi SmartPower supported devices from sudden power supply module failure. The USP-RPS continually monitors all attached devices. In the event of an internal AC/DC power supply failure, failover is automatic so ...

Power Backup. USP-RPS. 950W redundant power supply for rack-mounted UniFi devices. 950W DC power availability (6) DC SmartPower ports. 1.3" LCM touchscreen. Find a Distributor. SmartPower Cable. \$43.11. GST incl. ... USP-RPS. 950W redundant power supply for rack-mounted UniFi devices.

Power output (6) RPS DC ports: Power method (1) Universal AC input, 100--240V AC: Max. power consumption: 995W: Power supply: Internal 350W AC/DC Internal 645W AC/DC: Supported voltage range: 100--240V AC: Total output power 52V DC 11.5V DC: 11.54A (600W) 30.44A (350W) Max. output power per RPS port 52V DC 11.5V DC: 11.54A (600W) 30.44A ...

USP RPS LED (Ports 1 - 6) The LED lights up blue when there is an active power connection. USP Connect DC Output (Ports 1 - 6) Connect the included USP Cable to a UniFi device with a USP Connect DC input. (Additional USP cables are sold separately as model USP-Cable.) Power Port. Connect the included Power Cord to the Power port.

This is not like a UPS or battery backup. It's meant to provide a secondary power supply to the devices it's compatible with. So if a switch or console's PSU fails, the RPS will provide power to it until the bad PSU can be replaced. If the power goes out completely, this RPS will also go off. Unless of course it's plugged in to a UPS.

Power Backup: Marketing Information. The UniFi SmartPower Redundant Power System, model USP-RPS, is a proprietary redundant power system designed to protect up to six UniFi SmartPower supported devices from sudden power supply module failure. The USP-RPS continually monitors all attached devices. In the event of an internal AC/DC power supply ...
