

All Department of Energy (DOE) data owners should follow the procedures outlined below in preparing a data collection for public release. Legislative requirements, Office of Management and Budget (OMB) guidance, and DOE directives related to data qual...

The specificities of Renewable energy sources communities, also referred to as Renewable Energy Communities (RECs) in the Law, are considered in support schemes and urban and local planning strategies. Citizen Energy Communities (CECs) are also eligible to participate in most markets and activities. Slovenia - Overview of the policy framework

It draws upon the expertise, insights, and review of numerous international experts, to compile more than 5 000 policy records across 50 key policy types from more than 60 countries, all available in a public database, the Energy Policy Inventory. Distinct trends emerge from this comprehensive review as to the types of policy governments use to ...

Renewables on the rise For the 760 million people in the world who lack access to electricity, the introduction of modern clean energy solutions can enable vital services such as improved healthcare, better education, and internet access, thus creating new jobs, improving livelihoods, and reducing poverty. Driven by the global energy crisis and policy momentum, renewable ...

REN21 is a global policy network that provides a forum for international leadership on renewable energy in which ideas are shared and action is encouraged to promote renewable energy worldwide. Its goal is to bolster policy development for the rapid expansion of renewable energies in developing and industrialized economies.

From policy ambition to real action, the IEA's latest interactive database provides country and regional outlooks on climate commitments and net zero pledges. Dive in deeper to the explorer. ... Track global progress towards the goal of tripling renewable energy capacity by 2030.

The Energy Act of 2020 directs the Wind Energy Technologies Office and Solar Energy Technologies Office, within the U.S. Department of Energy (DOE) Office of Energy Efficiency and Renewable Energy, to produce a comprehensive database that provides the type, quantity, availability, and other properties of materials needed to construct wind and ...

It provides an account of the strategic drivers underpinning renewable energy (RE) technology deployment (energy security, economic development and environment protection) and assesses RE technologies with respect to these drivers, including an estimate of greenhouse gas emissions reductions due to RE technologies.

The Renewables 2021 Global Status Report is the worldwide reference document for the market, policy, and

technology trends in renewable energy for 2020. Crowdsourced from hundreds of contributors from industry, NGOs, governments, and academia across the world, this year's report raises a fundamental question: what is holding the world back from using the COVID-19 crisis ...

This fact sheet provides an overview of the Indian Renewable Energy and Energy Efficiency Policy Database (IREED) developed in collaboration by the United States Department of Energy and India's Ministry of New and Renewable Energy.

The International Energy Agency is at the forefront of global efforts to assess and analyse persistent energy access deficit, providing annual country-by-country data on access to electricity and clean cooking (Sustainable Development Goal [SDG] 7.1) and the main data source for tracking official progress towards SDG targets on renewables (SDG 7.2) and energy efficiency ...

The UK Renewable Energy Roadmap sets out a comprehensive suite of targeted, practical actions to accelerate renewable energy in the UK - driving innovation and the deployment of a wide range of renewables. It will help the UK Government meet our EU 2020 target, and should ensure that the cost of renewable energy falls over time. It ...

Approximately one-seventh of the world's primary energy is now sourced from renewable technologies. Note that this is based on renewable energy's share in the energy mix. Energy consumption represents the sum of electricity, transport, and heating. We look at the electricity mix later in this article.

The Renewable Energy Master Plan (REMP) seeks to increase the supply of renewable electricity from 13% of total electricity generation in 2015 to 23% in 2025 and 36% by 2030. Renewable electricity would then account for 10% of Nigerian total energy consumption by 2025.

Policies database. Past, existing or planned government policies and measures. Chart Library. Access every chart published across all IEA reports and analysis ... Renewable Energy Progress Tracker. Explore electricity, heat and renewable fuels data from Renewables 2024 and renewables ambitions by 2030 ... Policy report COP28 Tripling Renewable ...

The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2024 provides datasets on power-generation capacity for 2014-2023, actual power generation for 2014-2022 and renewable energy balances for over 150 countries and areas for 2021-2022. ...

Map of State Renewable Portfolio Standards (RPS) with Solar or Distributed Generation Provisions (pdf) The Database of State Incentives for Renewables & Efficiency (DSIRE), operated by the N.C. Clean Energy Technology Center, is the most comprehensive source of information on incentives and policies that support renewable energy and energy ...

Consumer energy affordability measures includes all measures intended to help consumers and enterprises weather high energy prices in light of the global energy crisis. This category includes policies enacted by governments in response to the international price rise that materialised in the fourth quarter of 2021 and was further aggravated by ...

Alternative Fuels and Advanced Vehicles Data Center (AFDC) Publications Database . Sponsored by the U.S. Department of Energy's (DOE) and administered by the National Renewable Energy Laboratory (NREL), the AFDC Publications Database is a comprehensive resource for publications about alternative fuels, advanced vehicles, and regulated fleets.

In 2020-2021, in response to the COVID 19 pandemic, China has committed at least USD 96.75 billion to supporting different energy types through new or amended policies, according to official government sources and other publicly available information. These public money commitments include: At least USD 25.34 billion for unconditional fossil fuels through 20 policies (14 ...

Renewable energy comes from unlimited, naturally replenished resources, such as the sun, tides, and wind. Renewable energy can be used for electricity generation, space and water heating and cooling, and transportation. Non-renewable energy, in contrast, comes from finite sources, such as coal, natural gas, and oil.
