

The free and pollution-free energy source is an excessive and highly efficient alternative energy source of global energy demand, so researcher attention intensively focused on this research (Dresselhaus and Thomas, 2001). Day by day, emitted CO<sub>2</sub> gas has been polluted globally (Chong et al., 2020) due to power plants for electricity generation.. Capture and ...

Which brings us to Sustainable Energy - Without the Hot Air. The author is a physics professor here in Cambridge, and is tired of discussions about energy policies that don't include numbers, just emotive terms. Instead of arguing for a specific solution ('No nukes'/'Don't hurt the economy'/'Green energy'/etc), his point is much broader.

Renewable energy (or green energy) ... Run-of-the-river hydroelectricity plants derive energy from rivers without the creation of a large reservoir. The water is typically conveyed along the side of the river valley (using channels, pipes and/or tunnels) until it is high above the valley floor, whereupon it can be allowed to fall through a ...
