Just starting my 4th mowing season with the original 42" Ryobi ZT mower (100 Ah) model. Unfortunately the batteries do not seem to hold a charge for more than 20 minutes anymore. This is the model with the original lead-acid batteries. I'm looking for information on how to replace the batteries with lithium ion. Is there a guide somewhere?

The battery should normally measure about 18V across the terminals (21V max). If it reads about 12V, then it is likely the battery protection circuit has activated because of cell imbalance. (Those were my symptoms.) Cell re-balance could also help if the battery isn't taking a full charge (not showing green on the fuel guage button).
