

What is a good business model for a solar power company?

Another popular business model for solar power companies is to lease or rent solar panels to the customers, who pay a fixed monthly fee for using the equipment. This model reduces the upfront cost and risk for the customers, who do not have to own, install, or maintain the solar panels, and who can enjoy the savings from lower electricity bills.

What is a solar business model?

A third business model for solar power companies is to sell solar products or services, such as solar kits, batteries, inverters, or software, to the customers, who can use them to generate their own electricity or to enhance their existing solar systems.

Do scholars and firms understand solar business models?

There is a mismatch in how scholars and firms understand solar business models. The business models of 241 solar firms in Sweden were mapped and analyzed. Policymakers must understand solar business models from a firm perspective. Customers and their needs are central in the business models of solar firms.

How many solar business models are there in Sweden?

The business models of 241 solar firms in Sweden were mapped and analyzed using a framework developed by Richardson (2008) as well as the roles, activities, and applications as highlighted in solar business model literature. This led us to identify six types of solar business models.

How do policymakers understand solar business models?

Policymakers must understand solar business models from a firm perspective. Customers and their needs are central in the business models of solar firms. Capabilities are determinant in the design of solar business models. A worldwide transition towards sustainable energy systems requires the diffusion of renewable electricity technologies.
