As utility rates continue to rise, residential buyers want a low-cost system designed for longevity and optimized for energy density that produces reliable kilowatt hours. On sunny days, the PV system might clip output by 1% or 2%, but very little energy is wasted when it's designed with a 1.2:1 to 1.3:1 DC/AC ratio.

Clipped energy is the portion of potential solar energy production that is lost due to limitations in a solar inverter, the inverter being a vital component of a solar power system. Its job is to convert the direct current (DC) from your solar panels into alternating current (AC) to be used or fed into the grid.
