

The large-scale development of energy storage began around 2000. From 2000 to 2010, energy storage technology was developed in the laboratory. Electrochemical energy storage is the focus of research in this period. From 2011 to 2015, energy storage technology gradually matured and entered the demonstration application stage.

Environmental issues: Energy storage has different environmental advantages, which make it an important technology to achieving sustainable development goals. Moreover, the widespread use of clean electricity can reduce carbon dioxide emissions (Faunce et al. 2013). Cost reduction: Different industrial and commercial systems need to be charged according to their energy costs.
