To mitigate climate change, there is an urgent need to transition the energy sector toward low-carbon technologies [1, 2] where electrical energy storage plays a key role to integrate more low-carbon resources and ensure electric grid reliability [[3], [4], [5]].Previous papers have demonstrated that deep decarbonization of the electricity system would require the ...

The increasing need for energy is one of the most pressing issues, driven by a growing population and rapid industrialization in developing countries [23, 24]. According to Benoit [25], developing nations have significant difficulty in finding the best method to get and use larger amounts of energy to support economic expansion sustainably. The increasing demand and ...

Hydrogen hydrate is a promising material for safe and potentially cost-effective hydrogen storage. In particular, hydrogen hydrate has potential for applications in large-scale stationary energy storage to dampen the temporal variation of renewable energy, for example, in the form of hydrogen-ready gas-fired power plants for generating energy when the renewable ...
