The basic purpose of having DC contactors in the forklift is to reliably disconnect the circuit during emergency conditions. The three-phase motors installed in the industrial vehicles and trucks are controlled by the inverter. The mechanism of controlling inside the inverter is undertaken by the semiconductors. In case of any technical problem in the semiconductor, the inverter may not ...

A contactor is a switching device, widely used for the switching of motors, capacitors (for power factor correction), and lights. As the name indicates it is used to make or break contacts like an ordinary on-off switch. The only difference is that the contactors have an electromagnet that holds the contacts when energized whereas switches do not have it.

DC contactors play an important role in the field of energy storage. Good quality and long life DC contactors with CE and UL approvals are the first choice for energy storage developers. Hotson EVD series: such as EVD250G12DA4, EVD250G1DA4,EVD300G1DA4, etc. The load voltage of this series of products is 12-1000Vdc, and there are a variety of ...
