

LAVA ENERGY ist der Partner der Immobilienwirtschaft bei der nachhaltigen und zuverlässigen Versorgung von Immobilien und Quartieren. Wir gehen mit unseren Partnern die Energiewende im Gebäude zielgerichtet an. Dazu bieten wir ein breites Spektrum an Leistungen rund um die Wärme-, Kälte- und Stromversorgung sowie innovative Konzepte wie ...

Uneven heat dissipation will affect the reliability and performance attenuation of tram supercapacitor, and reducing the energy consumption of heat dissipation is also a problem that must be solved in supercapacitor engineering applications. This paper takes the vehicle supercapacitor energy storage power supply as the research object, and uses computational ...

Our current research focuses on a new type of tram power supply system that combines ground charging devices and energy storage technology. Based on the existing operating mode of a tram on a certain line, this study examines the combination of ground-charging devices and energy storage technology to form a vehicle (with a Li battery and a super

Implementation of energy storage system on-board a tram allow the optimised recovery of braking energy and catenary free operation. Figure 3 shows the schematic which allows energy storage to be implemented on-board a tram. The braking resistor is installed in case the energy storage is unable to absorb braking energy. The energy flow

A hybrid energy storage system (HESS) of tram composed of different energy storage elements (ESEs) is gradually being adopted, leveraging the advantages of each ESE. The optimal sizing of HESS with a reasonable combination of different ESEs has become an important issue in improving energy management efficiency. Therefore, the optimal sizing method of battery ...

Since a shared electric grid is suffering from power superimposition when several trams charge at the same time, we propose to install stationary energy storage systems (SESSs) for power supply network to downsize charging equipment and reduce operational cost of the electric grid.

In order to design a well-performing hybrid storage system for trams, optimization of energy management strategy (EMS) and sizing is crucial. This paper proposes an improved EMS with energy interaction between the battery and supercapacitor and makes collaborative optimization on both sizing and EMS parameters to

obtain the best working performance of the hybrid ...

Simms, M.: Hybrid energy storage system: high-tech traction battery meets tram's hybrid energy storage system requirements. Ind. Technol. 2010(APR/MAY), 20 (2010) Google Scholar Meinert, M.: Experiences of the hybrid energy storage system Sitras HES based on a NiMH-battery and double layer capacitors in tram operation.

LAVA's winning competition entry for an energy park and energy storage building commenced construction in 2017. The existing cylindrical-shaped storage centre is transformed into a dynamic sculpture, a city icon, a knowledge hub on sustainable energy and fully accessible to the public with city views. A multi-layered facade structure is ...

This article proposes a rolling optimization strategy (ROS) based on wavelet neural network prediction and dynamic programming (DP) for tram equipped with on-board battery-supercapacitor hybrid energy storage system, and proves the rationality of using RB strategy to replace ROS strategy entirely or partially in some scenarios. This article focuses on ...

The energy storage system works as a short time storing and supporting electrical device. The result of this experiment is presented in Fig. 5. ... REFERENCES [1] L. Streit, P. Drabek, "Simulation model of tram with energy storage system," 2013 International Conference on Applied Electronics, Pilsen, 2013, pp. 1-4. [2] L. Latkovskis, V. Brazis ...

It is indeed expected that when some energy storage is installed along the line or on-board tram, energy recovery during braking can be enhanced. In fact, even when no enough load is present to adsorb energy from trains that are braking, the storage system can adsorb it, and deliver it at a different time, when enough load is present. ...

This article focuses on the optimization of energy management strategy (EMS) for the tram equipped with on-board battery-supercapacitor hybrid energy storage system. The purposes of the optimization are to prolong the battery life, improve the system efficiency, and realize real-time control. Therefore, based on the analysis of a large number of historical operation data, this ...

NAME OF PROJECT Energy Storage Centre LOCATION Heidelberg, Germany CLIENT Stadtwerke Heidelberg (SWH) STATUS Breaking ground 2017; completion due mid 2019 SIZE Diameter 25m; Height 56m; Capacity 19,500m³/40MW); Total park site 10.000m2. PRACTICE CREDITS. General Planners: LAVA and Wenzel+Wenzel Architecture: LAVA (Tobias ...

The modern tram system is an important part of urban public transport and has been widely developed around the world. In order to reduce the adverse impact of the power supply network on the urban landscape and the problem of large line loss and limited braking energy recovery, modern trams in some cities use on-board energy storage technology.

In recent years, the development of energy storage trams has attracted considerable attention. Our current research focuses on a new type of tram power supply system that combines ground charging devices and energy storage technology. Based on the existing operating mode of a tram on a certain line, this study examines the combination of ground ...

Furthermore, the energy storage mechanism of these two technologies heavily relies on the area's topography [10] pared to alternative energy storage technologies, LAES offers numerous notable benefits, including freedom from geographical and environmental constraints, a high energy storage density, and a quick response time [11].To be more precise, during off ...
